

# RAPS & EDPS SUBMISSIONS

Tessellate offers a robust solution for submitting Risk Adjustment Processing System (RAPS) and Encounter Data Processing System (EDPS) data to CMS for risk adjustment. This fully integrated

solution allows you to produce RAPS and EDPS files and offers an online portal to track all data sent and received between you, Tessellate, and CMS.

## KEY FEATURES

- Secure transmission and loading of client data files in bulk
- Data mapping and transformation for validation
- Production of submission files
- Receipt of applicable submitter certifications
- Submission of complete files to CMS that are compliant with agency technical specifications
- Online error and edit tool for corrections

## RAPS SUBMISSIONS

Our (RAPS) solution submits acceptable, risk-adjusting diagnosis codes to CMS. All of your claims and supplemental records are deduped and filtered in accordance with CMS submission rules.

The solution includes online tools including an error/edit module allowing you to make corrections within the system and recycle them for re-submission to CMS. This provides configurable error queues and workflows to help you manage your submissions.

These tools also include an end-to-end reconciliation of claims and supplemental records. Tessellate also offers financial forecasting based on RAPS return data allowing you to easily track CMS revenue and accrue for CMS true-up payments.

## EDPS SUBMISSIONS

Tessellate's proprietary, CMS-certified EDPS logic provides you with an end-to-end solution within our platform for formatting, validating, submitting, and reconciling encounter data.

The solution includes submission of professional, institutional, durable medical equipment (DME), and supplemental data files. Errors returned from CMS are displayed in our online portal, along with tools that enable you to correct errors within the system and automatically recycle them for re-submission to CMS.

This provides configurable error queues and workflows to help you manage your encounters.

## SOLUTION BENEFITS

- Secure HIPAA-compliant SFTP sites for transferring PHI
- Flexible online platform
- Robust editing tool with error queue management
- Submit both RAPS and EDPS files to CMS

## WHY TESSELLATE?

At Tessellate, our goal is to help you succeed. We are a leader in the healthcare industry offering proven solutions to health plans and providers that demonstrate improved Risk Score accuracy, reduced RADV audit risk and increased Star Ratings. Regardless if you are new to Medicare Advantage or simply want to improve upon your current success, we will collaborate with you to offer technology-enabled, multiple-point services, designed to achieve your goals. Our end-to-end Risk Adjustment and Quality programs bring together every piece of the puzzle to form seamless strategies that will improve revenue integrity and lower your administrative costs. These solutions are provider-centric, less abrasive and quickly implemented. With a client-first commitment, Tessellate has an established track record of delivering value and quality, and we are proud to offer our innovative and comprehensive portfolio of services:

- Comprehensive Medicare Advantage Risk Adjustment and Quality Program
- Prospective Provider Engagement Coordination (PEC) Program
- Retrospective Medical Record Retrieval and Review
- Medicare Advantage Risk Adjustment Program
- Medicare Advantage Quality Improvement Program
- RAPS and EDPS Submissions
- In-Home Assessments
- Enabling Technology Platform

## BY THE NUMBERS

- Serves more than 1 million members
- Operates in nearly 20 states and Puerto Rico
- Manages over \$5 billion in risk adjustment related revenue
- Delivers over \$300 million in quality related bonus revenue
- Achieved 4-Star rating for a national PPO plan year-over-year since 2012
